Abstract

Hybrid work system is the new working system, mostly used in IT organization. After COVID-19 pandemic most of the IT organization start using hybrid work model, which is combination of work from office and work from anywhere. This hybrid work model provides flexibility inwork; employees can balance their personal and professional work which improves the employee and organization productivity. This descriptive research study aims to identify, analyse the best practices used to establish, manage and sustain the hybrid work system in the IT organization. The study is done by reviewing existing academic literature, industry people interaction, industry reports, HR policies and organizational practices used in IT sector with hybrid work system. To identify the best practices for IT sector some key parameters are considered in the study like strategic planning, digital infrastructure, HR policies, leadership, communication tools, technological framework and organization culture. To sustain with hybrid work system some practices need to follow by the company such as employee engagement, performance management, feedback mechanism, cybersecurity and data protection. Some limitations are in the research study like the study is based on only the secondary data, only IT sector considered for the study and finding may change as per the organization size and culture. The findings indicates that the success of hybrid work culture is depend on integration of technology and people, clear policies, good leadership qualities, continuous evaluation of employee and organization.

Keywords: Hybrid Work System, Best Practices, Organizational Sustainability, IT organizations

1. Introduction

The nature of work has significantly transformed with rapid advancements in digital technologies and the growing demand for flexible work arrangements in IT organization. Among the various working model, hybrid work system where employee can work from home or from office have adopted by most of the IT organizations. The nature of IT work which combines advanced communication and collaboration of various digital technologies. The hybrid work model uses various digital tools like Zoom, Webex, Google meet, Microsoft team etc. for communication and collaboration. This hybrid work model is feasible to enhance the productivity, flexibility and employee well-being.

Despite of various advantages of hybrid work model, IT organizations encounter some challenges related to coordination, communication gaps, employee engagement, performance evaluation and seamless technology integration. In the absence of structured policies and management practices, hybrid work arrangements may lead to reduced collaboration, role ambiguity and uneven productivity outcomes. To overcome these challenges the need of clearly defined best practices that can support the successful establishment and long-term sustainability of hybrid work systems.

In this context, the study adopts a descriptive research approach to identify and analyse best practices for establishing, managing and sustaining hybridwork system in IT organizations. The insights received from existing literature and industry practices and the study seeks to develop a structured framework that can guide IT organizations in implementing, managing and sustainable hybrid work system.

Objectives of the study

1. To examine the strategic and technological practices supporting hybrid work model.
2. To identify HR and leadership practices essential for hybrid work model.
3. To analyse the organization practices that contribute to the long-term sustainability of hybrid work system in IT organization.

Literature review

1. Hybrid work system is combination of remote and on-site work. It allows flexibility to employee in choosing where and when work for the organization. The research suggest that hybrid work model can enhance the employee productivity and job satisfaction with appropriate organization structure and policies (Tammy D Allen, Timothy D Golden, Kristen M Shockley, 2015). Sometimes, the poorly manged hybrid work system may lead to employee isolation, reduced collaboration and communication gap.

2. IT sector is the earliest sector in the adoption of hybrid work system due to their reliance on digital tools and project-based work structure. The research indicates that work life balance, digital infrastructure, flexibility in working hours makes the hybrid work as an attractive option for IT employees (Prithwiraj Choudhury, Cirrus Foroughi, Barbara Larson, 2021). At the same time, the IT sector faces challenges like cybersecurity, performance evaluation etc. while working in hybrid work system.
3. Existing literature emphasizes the clear policies, leadership support, digital infrastructure and feedback mechanism in managing hybrid work effectively (Viswanath Venkatesh, James Y.L. Thong, Xin Xu, 2016). Organizations that invest in employee training and promote trust-based management are more likely to sustain in hybrid work success.

Research Methodology

The research methodology follows the systematic way to achieve the objectives of the research study. It ensures the reliability and accuracy of findings. This descriptive research study focuses on to identify best practices for establishing, manging and sustaining hybrid work system in IT organizations.

1. **Research Design:** The study adopts a descriptive research design, focusing on describing best practices associated with hybrid work systems in IT organizations.
2. **Data Sources:** The research is based on secondary data which includes peer reviewed journals, industry reports, organizational case studies, policy documents related to hybrid work system.
3. **Analysis Method:** Content analysis was used to review and synthesize information from multiple sources. Common methods and recurring practices were identified and categorized into major dimensions of hybrid work systems.

Best Practices for establishing, manging, sustaining Hybrid Work System in IT Organization

1. Best Practices for Establishing Hybrid Work System

- i. **Technology Readiness:** Technology places very important role in hybrid work system. While working in hybrid work environment different communication and technological tools used by employees for sharing the information with each other. Secure digital infrastructure, good internet connectivity, collaboration tools are required to work in hybrid model.
- ii. **Training:** Employees may require training to use different technical platforms while working in hybrid work system. They must update themselves with updated technology. They may take training or help of their colleagues to upgrade themselves with new technologies. To build the employees confidence and to improve the employee efficiency various training programs should arranged by organization for employees.
- iii. **Clear Policies:** HR of IT organization should create the clear policies. Employees should know all policies, eligibility, work schedule, management expectations, accounting mechanism of hybrid work system. Well defined and clear policies help organization to reduce ambiguity; it ensures consistency across team those who are working remotely. It maintains the transparency with on-site and remote working employees.
- iv. **Change Management:** Change Management helps employees and managers to follow new ways of working with new technology. A structured change management help employees

and managers for clear and transparent communication. It helps to understand why hybrid work model used for the organization, how it works, what are the benefits.

2. Best Practices for Managing Hybrid Work System

- i. **Structured Communication Framework:** In hybrid work system people are working from remote places. Organization should create standard practices for easy communication and sharing of the information. Regular virtual meetings, clearly defined communication channels help to reduce misunderstanding between the teams and it helps to maintain coordination across virtual teams.
- ii. **Team Building:** Employees are distributed across remote and on-site while working in hybrid work system. Organization must use virtual teamwork platforms and digital collaboration tools for easy working in hybrid mode. Video conferencing, shared workspaces, project management software are some tools which help employees to stay in connections and productive while working remotely.
- iii. **Management Support:** Organization management support is required while employees are working remotely. Management leaders must know how to work and manage virtual teams effectively. They must focus on empathy, trust and outcome-based performance rather than physical presence of employee. They must maintain clear performance standards and expectations while providing flexibility and support to employees.
- iv. **Outcome based Performance Management:** Outcome based performance management focuses on employees' results, achievements rather than their physical presence or working hours. Leaders allow employees to manage their work schedules, define their goals. Clear work allocation, performance matrix, timelines help employees to understand expectations of leaders and they take ownership of their responsibilities.

3. Best practices for sustaining Hybrid Work System

- i. **Organization Working Culture:** Organization should inform employees about the organizational goals, their expectations from employees, their working process. It will help employees to work smoothly, efficiently and more productive. A strong organizational culture plays a very important role for maintaining work environment productive. Regular communication, recognition of employee's achievements, equal opportunities to on-site and remote employees help employees to feel connected with their teams and organization. It will help employees to maintain strong bonding with organization.
- ii. **Well-Being Initiatives:** Hybrid Work Model allows flexibility in working hours and workplace to manage employee's personal and professional responsibilities. Flexibility in work reduces stress, burnout of employee and it will improve the overall job satisfaction of employee. Organizations also support mental well-being of employee by counselling, arranging wellness programs, workshops, medical checkups. A strong well-being initiative for employee enhances productivity, retention and organizational performance.
- iii. **Feedback System:** Regular feedback system helps organization to identify challenges, gaps and improvement areas. Employee surveys, performance reviews and feedback sessions are used to check the effectiveness of hybrid work system. The feedback system provides employees to share their experiences; suggestions related to hybrid work system.

Regular feedback mechanisms contribute to more productive, responsive and sustainable with hybrid work system.

- iv. **Cybersecurity:** Cybersecurity place vital role in hybrid work system as employees are working from different locations and devices. Organizations must use strong security protocols, data protection practices, authentication, permissions to ensure that only authorized person can access organization sensitive data. It helps to build employee and client trust on organization while working in hybrid work system.

Findings of the study

The findings of descriptive analysis are as follows:

1. **Integration of Technology, People and Process:** Use of technology enables seamless communication and coordination. Skilled people ensure their work efficiency. Well-defined processes ensure the work effectively. A balanced integration helps organizations to be more productive, flexible and consistent while working in hybrid work system.
2. **Well Defined Policies:** Organizations should define clear policies to reduce confusion and inconsistencies while working in hybrid mode. Well defined policies provide clarity for work schedule, performance expectations, communication rules and data security.
3. **Strong Digital Infrastructure:** Strong digital tools help to maintain efficient collaboration, smooth coordination between virtual teams and secure access to organization resources in hybrid work model.
4. **Leadership Capabilities:** Organization leaders must connect with employees who are working remotely. They require strong coordination, trust for employees who work from different places with different working hour. Engaged employees are more motivated and committed which enhance team performance and organization goals in hybrid work system.
5. **Regular Feedback System:** Regular feedback mechanism is required for long-term sustainability of hybrid work system. Feedback system enables organization to assess hybrid work practices, employee performances, employee expectations and organization outcomes. Organization can ensure that the hybrid work system remain effective, relevant and productive over time.

Limitations of the study

The limitations of the study are as follows:

1. The study is based on secondary data. Existing literature, industry reports, policies, published research papers are referred in the study.
2. Different organization use different hybrid work system based on their workforce structure, management policies, organization requirements and regional work norms. Therefore, the result may not be applicable for all organization.
3. The study is focused on only IT sector, which use high digital technology and flexibility in hybrid work. As a result, the findings may not be fully applicable for other sectors like manufacturing, education etc.

Conclusion

The study highlights that the successful establishment, management and sustainability of hybrid work require the integration of technology, people and process. Well-defined policies, good technological infrastructure, capable leadership and supportive work culture makes employee productive in hybrid work system. Organization may implement best practices such as outcome-based system, employee well-being initiatives, feedback system and effective change management. Hybrid work model enhances the productivity and efficiency of employee and promote the employee engagement, satisfaction which contribute to long-term organization performance.
